The Otiom Dementia collaboration

The result of Denmark's largest public-private innovation collaboration.

Goal:
To create a solution that would allow people to move securely everywhere, without relatives or care takers - having to worry about loosing track of the person with dementia.
In other words: more freedom and less despair.
A solution developed to matches the needs for:

- Passive tracking
- Improved life Quality
- Long battery life
- Precise and Secure
- User friendly and Intuitive
- High Tech quality
- Manpower savings
- Public cost reducing
Developed in close collaboration with the users
Locates quickly and accurately inside and out
Independent of local infrastructure
Intuitive user interface
Unique ID, each tracker is set up with personal preferences
The NB-IoT technology - Low power consumption
Waterproof, can withstand machine wash up to 60 degrees
Transferable from private to nursing homes or hospitals
Saves valuable time for Caretakers
GDPR Compliant
